ProVerne 

## Overview

ProVerne has created an advanced system for flight crew training scheduling, planning, tracking and qualifications management. With seamless integration and clear, concise visualizations you'll get better planning and visibility on training pipeline performance and clear forecasts of how well you're meeting your operational training targets.

ProVerne's unique implementation approach lets you design workflows, tailor dashboards and generate customized reports so that accurate information is distributed in near real-time. Completely web-based, ProVerne's cloud solution follows our unique design standard that requires minimal to no training to get started.

## Features

### Training Assignment and Tracking

- Create tailored footprints based on equipment, seat and crew demographics with sequenced events and specific durations
- Assign crew members to footprints, assemble classes and plan the logistics of each training
- Detailed tracking of optimal, actual and projected training progress and completion at the crewmember and class level
- Alerts and reporting for accurate Line-Ready Crew availability forecasts
- Import crew data from existing CMS (if not using with ProVerne CMS)
- Define and update release dates and reminders for delayed trainings

### Crew Qualifications Management

- Customizable repository for Crew Qualifications documentation
- Track medical, travel, training and other expiry dates with automated notifications

### Training Bidding Support

- Support and integration for Training Bidding (requires Vacation and Vacancy Bidding platform)
- Crew notifications using Ascension TEAM

## Technology and hosting

ProVerne products are offered as Software-As-A-Service and are deployed on Amazon Web Services, allowing us to further guarantee stability and systems security.

And, unlike many SaaS solutions, ProVerne tools are device-agnostic and can be accessed through any standard web or mobile browser, eliminating roll-out/upgrade downtime, supporting Crew "Bring Your Own Device", and having NO requirement for additional software or applications to be installed.

## Implementation and Support

ProVerne's unique, rapid-prototyping implementation approach gives you a solution tailored to your organization with an amazing time-to-market. Typically, you'll see your first iteration in two weeks or less and from there we'll work closely with your team to make sure that layouts, dashboards and workflows all are optimized to your unique operation. With ProVerne, there are no surprises, and every engagement is an opportunity to exceed expectations.

ProVerne stands apart from other providers in that we are on a constant mission to ensure that you are receiving maximum value for your investment. Everything, from the application to payments and administration, is designed to reduce overhead and keep you focused on the business.

And once you're live, we continue to support you with customized SLAs based on your airline requirements, as well as a dedicated JIRA portal for reporting and tracking service issues.
